Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 are, drawn to a method of allocating resources, classified in class 705, subclass 5.
- II. Claims 8-12, drawn to a network server computer, classified in class 709, subclass 205.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice other materially different processes. A network server computer can be used in other materially different processes, such as supporting a web site on the Internet, storing program files, distributing program files, permitting shared access to program files, and storing any type of compute readable data.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
